IMS FUNDAMENTAL PROJECT

By Solomon Boundy

About Me

- I have no formal background in tech or coding

About Me

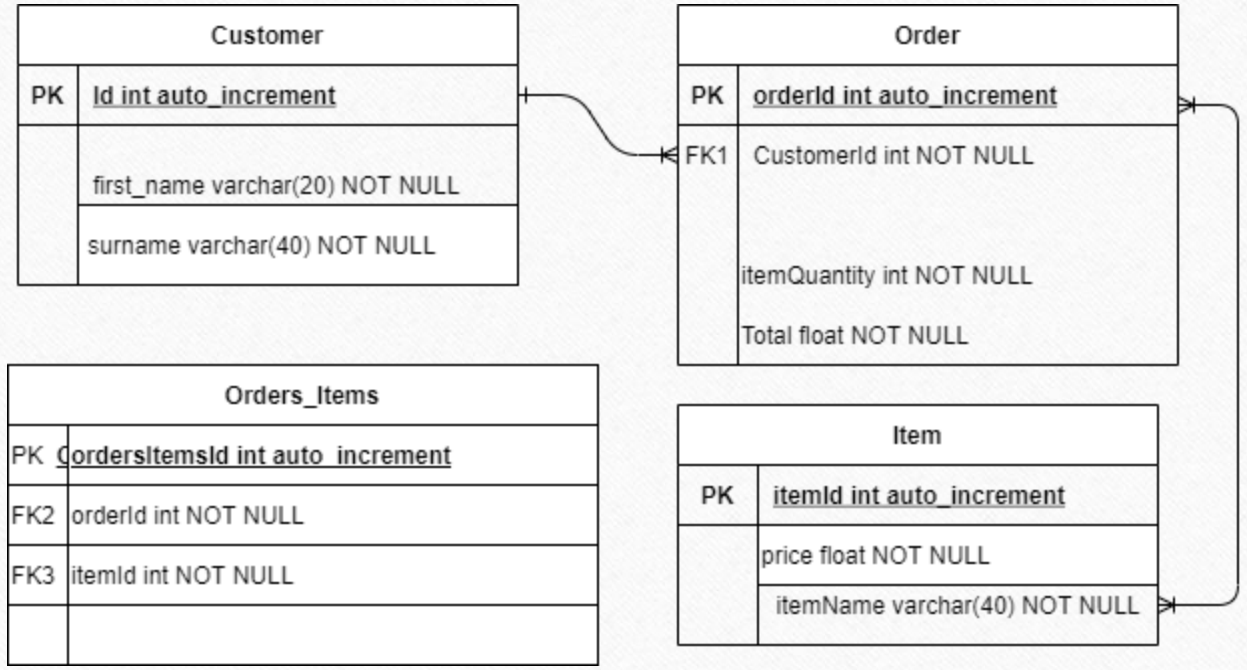
- I have no formal background in tech or coding
- Started messing around with code in python about a year ago

About Me

- I have no formal background in tech or coding
- Started messing around with code in python about a year ago
- I am now employed by QA, training to be an IT consultant

How did I approach the Specification?

- I approached the specification, first by preparing an ERD in order to understand which tables were needed and the relationships between each table
- I then prepared a Jira board in order to break down individual tasks to make them more manageable over the course of the week.



Customer
PK
Id int auto_increment
first_name varchar(20) NOT NULL
surname varchar(40) NOT NULL
Order
PK
orderId int auto_increment
FK1
CustomerId int NOT NULL
itemQuantity int NOT NULL
Total float NOT NULL
Orders_Items
PK
ordersItemsId int auto_increment
FK2
orderId int NOT NULL
FK3
itemId int NOT NULL
Item
PK
itemId int auto_increment
price float NOT NULL
itemName varchar(40) NOT NULL

What technologies have you learned for the project?

❖For this specific project I had to use a range of different projects,

Such as:

- Jira – to create epics and user stories in order to make the project more manageable with a clear path

What technologies have you learned for the project?

❖For this specific project I had to use a range of different projects,

Such as:

- Jira – a web-based project management system, I used this to create epics and user stories in order to make the project more manageable with a clear path
- Git – for version control, and to keep things up to date on an accessible repository

What technologies have you learned for the project?

❖For this specific project I had to use a range of different projects,

Such as:

- MySQL Workbench – Used to create and manipulate data in a database

What technologies have you learned for the project?

❖For this specific project I had to use a range of different projects,

Such as:

- MySQL Workbench – Used to create and manipulate data in a database
- Eclipse – This was the IDE I used to code the java application

What technologies have you learned for the project?

❖For this specific project I had to use a range of different projects,

Such as:

- MySQL Workbench – Used to create and manipulate data in a database
- Eclipse – This was the IDE I used to code the java application
- Java – I used Java to write the majority of the code for the program

What technologies have you learned for the project?

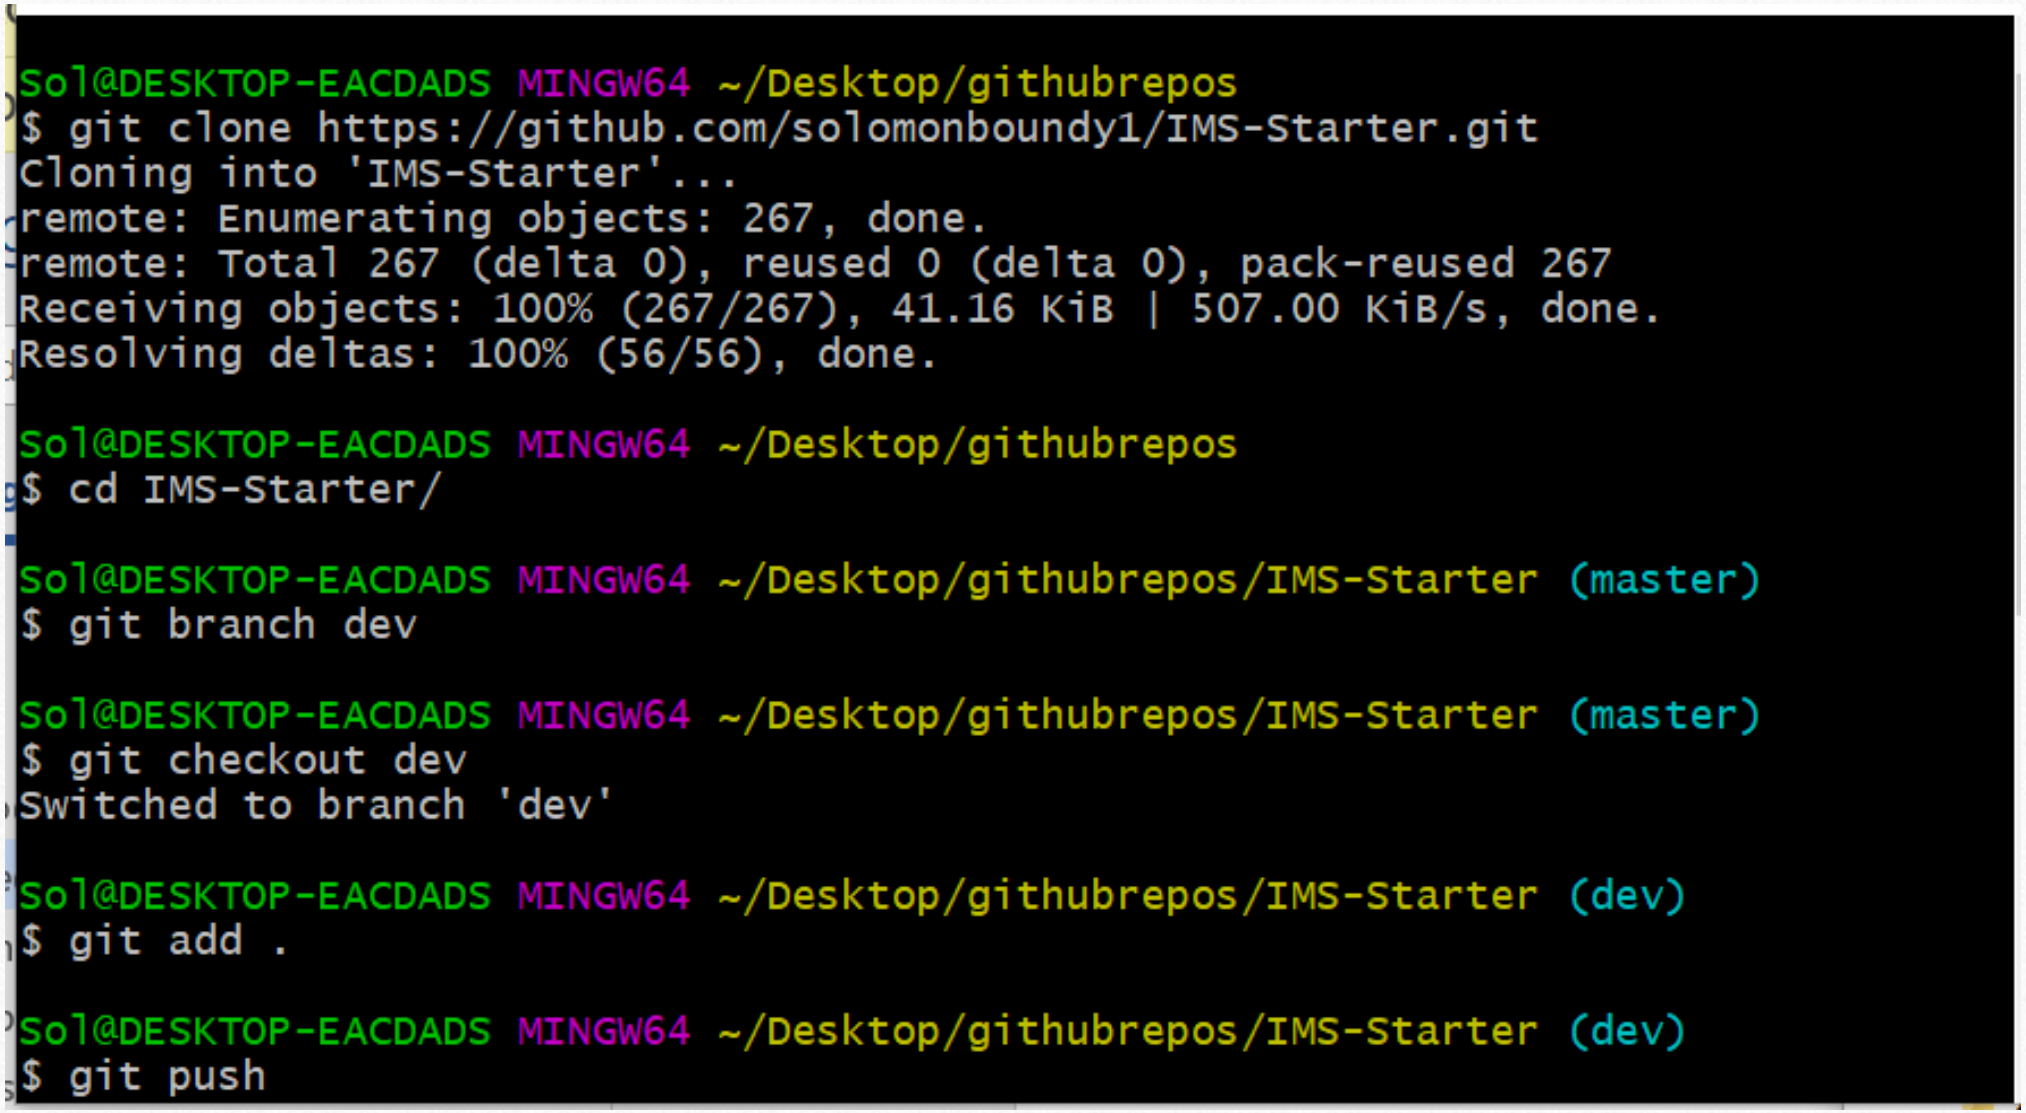
❖For this specific project I had to use a range of different projects,

Such as:

- MySQL Workbench – Used to create and manipulate data in a database
- Eclipse – This was the IDE I used to code the java application
- Java – I used Java to write the majority of the code for the program
- JUnit – Used to test the individual units of the different classes
- Mockito – Used to make mock ups and test the relationships between the code and database.

How did you approach version control?

- I used git and created a repo in github to store my files.
- I used the feature branch model and created features from the dev branch in order to keep things consistent.



Sol@DESKTOP-EACDADS MINGW64 ~/Desktop/githubrepos
$ git clone https://github.com/solomonboundy1/IMS-Starter.git

$
```

What was tested?

- I tested the individual methods of each class that I coded, using JUnit
- I also tested each class using Mockito

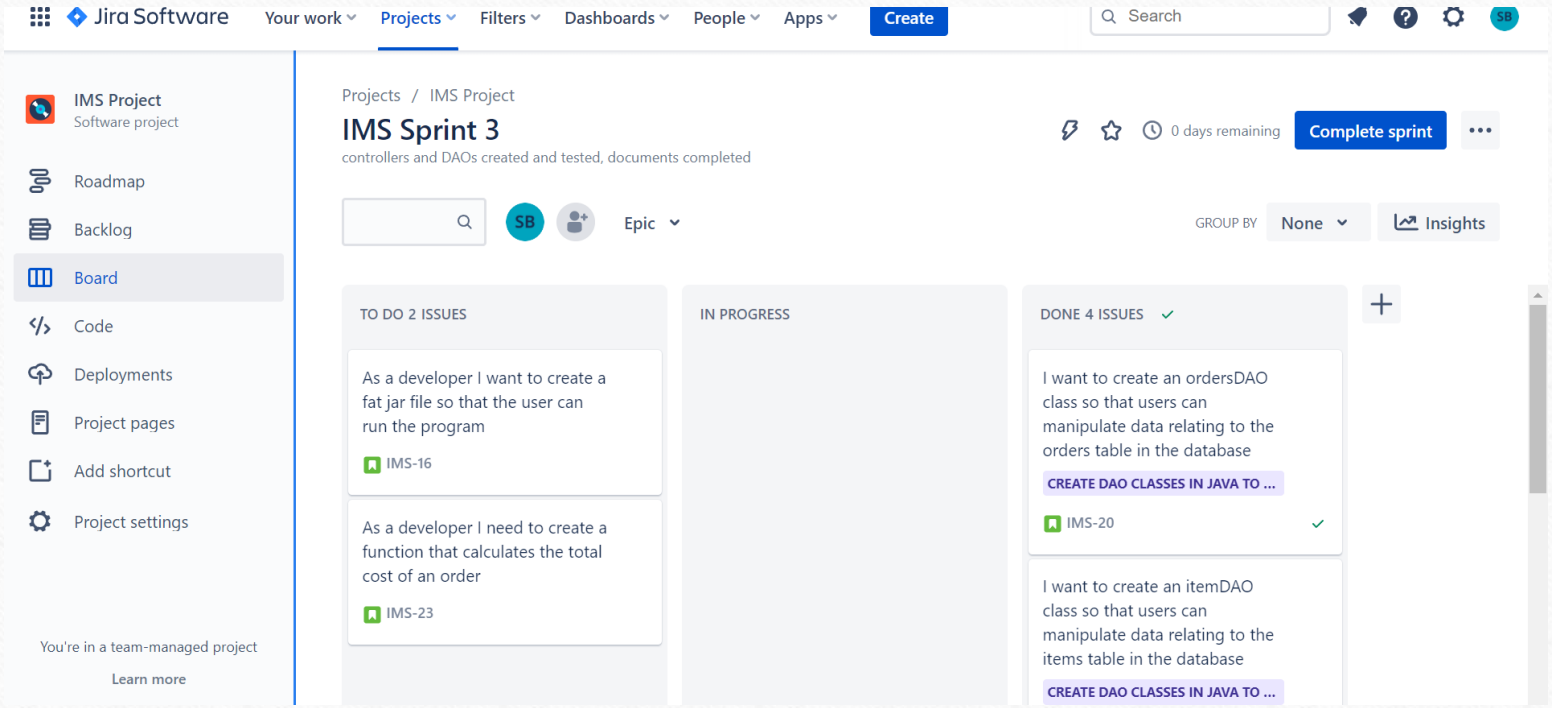
Demonstration



Sprint Review

Completed so far

- MySQL tables and database created
- Customer, Items, and Orders classes created
- All DAOs have been created
- All Controllers have been created

Incomplete

- Still some testing left to do on the OrdersDAO and Order Controller
- A method to calculate the total of a customer order

Sprint Retrospective

In retrospect, I did well in creating the tables in MySQL and connecting the classes to the corresponding table.

I could have figured out an easier way to add items to an order, as the way that I did it made it very difficult to manipulate the data from other classes.

Time management is also something that I could improve upon for the next time, as I spent a lot of my time trying to fix the methods in the orderDAO which consequently led to less time for testing in the end.

Conclusion

Although I found this challenge particularly challenging, it really got me familiar with the Java syntax and I learned a lot through getting my hands dirty with the code. It was also particularly challenging given I am brand new to the world of Java and using so many technologies together did not come as second nature. However, I enjoyed this project a lot even if I did not finish it in time!!

Many thanks
